

A close-up, top-down view of a grey television remote control. The remote has several buttons, including a red power button at the top, a blue button, and a central 'ENTER' button. Overlaid on the remote is the text 'Get the VERY Best Picture From Your TV Screen' in a bold, orange, sans-serif font with a white outline. The text is arranged in five lines: 'Get the' on the first line, 'VERY Best' on the second line, 'Picture From' on the third line, 'Your TV' on the fourth line, and 'Screen' on the fifth line. The word 'VERY' is in all caps and larger than the other words in the phrase. The 'ENTER' button on the remote is visible behind the word 'Picture'.

Get the VERY Best Picture From Your TV Screen

Ben and Nigel T & T Digital

Hi and welcome from Ben and Nigel from T and T Digital.

Our one aim as a business is to bring crystal clear images and sound to our customers.

Our eBook gives you a lot of help and advice on how to get a better TV picture.

You may have just purchased a new TV, the latest Hi Def 3D plasma screen or discreet slimline LED TV or have an

older model that you are perfectly happy with. Whatever your TV of choice the picture will only be as good as your aerial, cable and connections.

If you think the picture quality could be better, you're probably right and it could be something to do with the aerial, cable or connectors used. Even if you think it looks fine if your aerial is not perfectly aligned you may be missing out.

If you're still unhappy with your picture after trying all our hints and tips call us on 01483 320325 and let us help

Ben & Nigel

So to the first issue...

LOCATION, LOCATION, LOCATION

Place the TV where the greatest number of people in the room can view the screen. Sometimes we see people who simply locate the TV conveniently close to the wall socket. We find that builders usually put the socket on the nearest point on the wall to where the cable enters the room. So if the best spot to view the TV is away from the socket run a cable or move the socket.

READ THE MANUAL

Yes we know, you get it home, pull the TV out the box and plug it in. These days TVs set themselves up and then you are ready to go. However the standard out-the-box settings can be wrong for home viewing. TV manufacturers tend to use super sharp, over saturated colours so their screen stands out when compared to the 40 other screens that are on display in the showroom. This can be all wrong for your viewing environment at home. So read the manual and set up the picture, sound and signal for your viewing pleasure in your home.

If you have just spent a few hundred pounds on your TV then consider spending a little more to ensure it is professionally set up. Professional calibration requires specialist training and equipment and can, in some circumstances, lengthen the lifespan of your screen.

Call us 01483 320325 to find out how we can help you get the most out of your TV no matter what age or size.

THE ANSWER IS BLACK AND WHITE

To make your picture look as good as possible means getting the contrast perfectly balanced. This means setting it so that your blacks are as dark as possible but ensuring your whites are still visibly white.

COLOUR ME PERFECT

Use the colour and saturation control sparingly. Do not compensate for a brightly lit room by over saturating the image, this can lead to image burn and cause issue with modern TVs. Instead try to ensure bold colours do not bleed into each other and that people look a natural shade rather than "fake tan" orange.

CUTTING EDGE

Use your sharpness control to make your picture crisp without ghosting or double lining (appearing like the edge has two lines). Check on fast moving images like action movies and sports events where editing and images move fast.

Call us 01483 320325 if you have a Hi Def TV but do not have a pin sharp picture

READY? GET SET. GO!

Presets can be useful to get your TV up and running quickly but we would encourage you to take time to set up the image for your most frequently watched programmes or films. Some TVs allow you to save settings per input and some higher end TVs can allow settings to be saved channel by channel. Whatever you have, a few seconds just adjusting the picture can add to the overall viewing pleasure, especially when using Hi Definition playback.

We have calibration devices to ensure your getting the best out of your set and aerial signal so call us to arrange a set up and advisory session in your home.

ALL THAT GLITTERS IS NOT GOLD

We get asked a lot of time "Do expensive cables, with gold plated terminals make a difference?". The answer is yes... sometimes. If you have a simple TV with a poorly aligned aerial with a weak signal then a gold plated cable is not likely to make much of a difference. We'd sort the other issues out first before investing in an expensive cable. However a super cheap cable on any setup is likely to be a weak point and we'd avoid any of the super cheap cables we see for sale on eBay. They might do short term but if you have spent a few hundred pounds on a TV and less than a fiver on a cable don't expect to get the best out of your screen.

We have a range of good quality accessories that we can supply, call us to find out more. Call us 01483 320325

DUST TO DUST

Electrical equipment attracts dust due to the electro-static build up on components. Your TV screen should be wiped regularly with a lint free soft cloth. This ensures it remains clear of dust (and kids finger prints), using a microfiber cloth that is slightly damp can lift all but the most stubborn dirt off. Keeping the back of your TV hoovered and free from dust and dust bunnies will help vent excess heat and prolong the life of your screen. This is why we recommend, if you have the space, placing your screen on the wall at a suitable, comfortable height.

We offer full installation service to ensure your TV is correctly positioned and safely affixed to the wall. We also ensure any wiring, plastering or making good is done to the highest standard. Call us to discuss your project, from simple TV wall brackets to full cinema screening room, we can help you.

CHECK YOUR SOURCE

If you have a Hi Def TV, and a standard def DVD player then you are not going to be getting the most out of your screen. That may seem like a very obvious statement but we regularly get asked to improve the image from standard definition sources. A Hi Def screen requires Hi Def sources: Blu Ray, X Box, PS3, Hi Def channels can all be easily input to your screen. Of course they are an additional expense!

Make sure your source is friendly with your HDTV for the best picture quality. If you are unsure give us a call to get expert advice.

Call us 01483 320325 we'll show you the easiest way to achieve this. We have a solution for most budgets.

CALL THE PROFESSIONALS

OK, so we're biased here, but to absolutely get the very best out of your screen and ensure it lasts then call the professionals. We do nothing but TV installs, multi room installs, moving, resisting and upgrading aerials and satellite dishes. We have the equipment to save you hours of messing about and get the best from your TV quickly.

Give us a call
